Viktor Novak

Embedded Software Engineer

Rochester, NY | viktor.novak@example.com | (555) 010-0154

SUMMARY

Embedded software engineer with 7 years writing firmware in C for ARM Cortex-M devices in medical and industrial products.

TECHNICAL SKILLS

Languages: C, C++, Python, assembly (ARM)
Platforms: ARM Cortex-M, STM32, Nordic nRF52, FreeRTOS, Embedded Linux, Yocto
Interfaces: I2C, SPI, UART, CAN, USB, Bluetooth Low Energy
Tools: JTAG, oscilloscope, logic analyzer, GDB, CMake, Git, Jenkins
Standards: MISRA C, IEC 62304, unit testing with Unity and CMock

EXPERIENCE

Senior Firmware Engineer, *Aurelia Medical Devices* **Jan 2021 - Present**

- Wrote FreeRTOS firmware for an infusion pump controller meeting IEC 62304 Class B requirements.
- Implemented a bootloader with signed over-the-air updates over BLE for 20,000 deployed devices.
- Reduced power draw by 30% by moving sensor sampling to DMA and adding sleep states.
- Raised unit test coverage from 40% to 82% with Unity and CMock in CI.

Embedded Engineer, *Ridgeline Controls* **Jun 2017 - Dec 2020**

- Developed CAN bus communication drivers for industrial motor controllers.
- Debugged timing issues with a logic analyzer and oscilloscope, fixing a rare field failure.

EDUCATION

B.S. Electrical Engineering, Genesee Tech (2017)
